Purpose of Contact: D-Ponds sediment sampling

Discussion

An approach for sampling the sediment depth in ponds was developed and implemented for the Comprehensive Risk Assessment (CRA) data adequacy samples. However, this approach cannot be used at the D-Ponds because the dam is not wide enough to support the crane used to swing the geoprobe onto crane mats in the ponds. Pond sediments have been approximately 3 feet deep in the ponds sampled for this project. This sample depth is obtainable using manual techniques. Therefore, manual-collection methods will be used to collect pond sediments in D-1 and D-2. The samples will be collected according to the CRA Sampling and Analysis Plan Addendum 05-01, Phase 2-Targeted Sampling, except the samples will be collected using a boat placed into the ponds to get into the area of deeper sediments.

In addition to the regulatory contacts listed above, Tracy Hammon was also contacted and found this approach acceptable.
